```

Hladanie prvocisel

In [5]:
```
# prevzane z https://districtdatalabs.silvrback.com/getting-started-with-spark-ir

def isprime(n):
    """
    check if integer n is a prime
    """
    # make sure n is a positive integer
    n = abs(int(n))
    # 0 and 1 are not primes
    if n < 2:
        return False
    # 2 is the only even prime number
    if n == 2:
        return True
    # all other even numbers are not primes
    if not n & 1:
        return False
    # range starts with 3 and only needs to go up the square root of n
    # for all odd numbers
    for x in range(3, int(n**0.5)+1, 2):
        if n % x == 0:
            return False
    return True
```

In [6]:
```
import time
```

In [7]:
```
nums = sc.parallelize(range(10**6))
```

In [8]:
```
start = time.time()
print(nums.filter(isprime).count())
end = time.time()
print("Elapsed time: {} s".format(end - start))
```

```
78498
Elapsed time: 3.721515655517578 s
```

Nedistribuovany vypocet

In [9]:
```
l_nums = sc.parallelize(range(10**6), 1)
```

In [10]:
```
start = time.time()
print(l_nums.filter(isprime).count())
end = time.time()
print("Elapsed time: {} s".format(end - start))
```

```
78498
Elapsed time: 4.75981068611145 s
```

Delayed evaluation

In [11]:
```
start = time.time()
primes = nums.filter(isprime)
end = time.time()
print("Elapsed time: {} s".format(end - start))
```

```
Elapsed time: 0.0001418590545654297 s
```

v predchadzajucej bunke sa este nic nevykonalo, nepouzil som funkiu, ktora by mala vracat nejaky vysledok, tak sa len pripravil vypocet na spustenie, ale nespustil sa

In [13]:
```
start = time.time()
print(nums.filter(isprime).take(5))
# print(nums.filter(isprime).takeOrdered(5, key = lambda x: -x))
end = time.time()
print("Elapsed time: {} s".format(end - start))
```

```
[2, 3, 5, 7, 11]
Elapsed time: 0.05002427101135254 s
```

MapReduce na spracovanie suboru

In [14]:
```
# Teraz tie data natahujem z jednueho suboru na disku jedneho fyzickeho pocitaca,
# natiahnutie z dristribuovaneho suoroveho systemu a vykonavat ten vypocet na cel
# Jediny rozdiel by bol v tomto riadku
distFile = sc.textFile("data/shakespeare.txt")
```

In [15]:
```
distFile.count()
```

Out[15]:
```
147928
```

In [16]:
